

Project Design Phase
Proposed Solution Template

Date	2 October 2026
Team ID	SWTID-2026-8368
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Making a comic needs writing, drawing and layout skills together. Students, teachers and hobbyists have story ideas but no easy, affordable way to turn them into illustrated comics, and free AI quotas make long stories fail.
2.	Idea / Solution description	A web app where the user types a story idea, genre and panel count. Gemini Flash creates the outline, a second Gemini model writes the full story with panel captions, and Stable Diffusion v1.5 draws every panel. Panels are laid out on pages and exported as a PDF comic.
3.	Novelty / Uniqueness	One tool covers the whole pipeline (outline, story, images, layout, PDF) instead of separate apps. Two Gemini models share the free-tier quota (5 requests/min, 20/day each). Per-panel scene prompts keep images matched to the story.
4.	Social Impact / Customer Satisfaction	Lets non-artists create and share stories, supports classroom storytelling and reading practice for children, and builds creativity and confidence. A full comic is ready in about 104 s instead of days of manual work.
5.	Business Model (Revenue Model)	Freemium model: a free tier with limited comics per day, and a paid plan for more panels, higher image quality, styles and PDF without watermark. Optional school licences and printed-comic sales.
6.	Scalability of the Solution	Stateless FastAPI routes allow horizontal scaling. Panel count is configurable, models can be swapped or moved to a cloud GPU server, and generation jobs can be queued as the number of users grows.
